It can be expected that global cooling services and not CO2 offsets will become the base of the new carbon sink economy.

# Product Certifications

## The Global Organic Textile Standard

The standard OCS was established in 2007 by Textile/Organic Exchange and refers in its requirements to the superordinate Content Claim Standard (CCS). In order to label respective articles with OCS, also the complete supply chain has to be certified by OCS. Contrary to GOTS, OCS allows a minimum of 5% organic fiber material in the product. Additionally, blending with conventional cotton or polyester is still allowed.

## Organic Content Standard

## Global Recycled Standard

Textile Exchange's Global Recycled Standard (GRS) is an internationally recognized standard that sets requirements for the certification of recycled materials and third-party traceability of the supply chain. It sets new standards for the sustainable use of recycled materials in products and ensures that products bearing the GRS logo are made from recycled materials and meet high social, environmental and chemical criteria.

Textile Exchange's Recycled Claim Standard (RCS) is an internationally recognized standard that sets requirements for the certification of recycled materials and third-party traceability of the supply chain. It sets new standards for the sustainable use of recycled materials in products and ensures that products bearing the RCS logo are made from recycled materials. By adhering to strict guidelines for the use of recycled materials and transparency along the supply chain, the RCS sets a new benchmark for the textile industry.

## Recycled Claim Standard

## Responsible down standard

The Responsible Down Standard (RDS) from Textile Exchange sets new standards for the ethical and environmentally conscious use of down in the clothing industry.

This internationally recognized standard ensures that down and feathers in products made from geese and ducks come from ethically responsible sources. By adhering to strict criteria for animal welfare, land management and transparency, the RDS sets a new benchmark for the clothing industry.

Textile Exchange's Responsible Wool Standard (RWS) sets new standards for sustainability in the textile industry. This internationally recognized standard ensures that wool comes from animals that are kept in good conditions and that the environment is respected.

By adhering to strict criteria for animal welfare, land management and transparency, the RWS offers a clear and reliable guarantee that the products carrying this standard have been manufactured to the highest standards.

Responsible Wool standard
